

OMOS Inc. Introduces the iScape, a Revolution in Personal Technology

TECHWORLD – NEW YORK, NY – OMOS today introduced **iScape®**, a device combining several products: a mobile phone, an audio/video entertainment system, a personal computer, and a revolutionary technology called the ‘Scape Button’, that finally bridges the gap between digital and physical life. Using cutting edge prototyping technology only recently licensed for public use, iScape ushers in an era where information and ideas can be translated into the physical world.

“iScape is basically science fiction becoming reality. Now the mind and body can finally meet and exchange grandiose pleasantries,” says Anurag Thirupathiwala, CEO of OMOS Inc. “Internationally, technologically, metaphysically, and literally - the human psyche can be at once the proverbial ‘keyboard’ and ‘monitor’ – plus, there are a whole bunch of cool applications that come with it.”

A Revolution in Mobile Communication

The iScape integrates your contact lists from Google, Microsoft, Palm, Mac, and nearly all applications, to ensure that you always have the most up-to-the-minute information. With the downloadable application **Acquaintance®**, the iScape uses GPS tracking to sense the proximity of these contacts and alert you of their whereabouts..

With **Intonation®**, a voice and brainwave recognition software merged with a personal calendar, iScape can anticipate and suggest a list of phone calls that should be made hourly.

iScape’s new *Real Silent Mode* takes communication to the next level by closed-captioning all phone conversations and converting them into to SMS. Now you can read voicemails and hear text messages. With software that is at once predictive and spellchecking, iScape has the fastest and most accurate QWERTY touch screen on the market.

With its 10 megapixel camera and HDV Camcorder, iScape allows you shoot short films, documentaries, and music videos with the click of a button. It even comes with **Flipbook®** that give you non-linear editing capabilities via the convenient USB input/output .

Full Hi-Def Entertainment System

Through a cross promotion with *onScape* Interactive, iScape introduces **Babel**®, a seemingly unending library of information that includes music, movies, video games, and books. Babel is the first fully integrated storehouse of creative arts that allows you to access your favorite artist, song, film, genre, mood, and pretension from just a touch of a button.

In POV mode, the visual user interface recreates the vast architecture of the library of Babel, and allows the user to 'run', i.e. 'browse' around the facilities using the card catalogue and Dewey Decimal system. You can also use Jukebox or a Windows based interface to navigate your entertainment.

With its 4" display and stereo speakers, you don't even need headphones to hear your favorite music and movies in 24-bit surround sound. Record local analog programs on this mobile DVR device, and watch television and hear radio from nearly 300 countries worldwide. Imagine seeing anything anytime with the click of a button.

Broadband Internetical Tour de Force

iScape takes you anywhere anytime with its wireless broadband capabilities. iScape uses rich HTML format and can download pictures, video, and other files while you peruse your inbox. It is able to sync up with most industry standard IMAP and POP based email services, such as Microsoft Entourage, Apple .Mac Mail, AOL Mail, Google Gmail and most ISP mail services.

A push sensitive screen allows the user to browse, scroll, and zoom into windows with the most minute change in pressure. With NerveReader®, a newly developed user interface, touch screen technology has entered a next phase of innovation.

SCAPE Button – A revolution in Quantum Engineering

What was once reserved for the annals of science fiction is now a reality. South Asian technology think tank, F.O. Laboratories, headed by Shiv Ganeshwari, has created the 'Scape' Button located on the non-screen side of the iScape. It is simply one all-in-one button.

What does the 'Scape' button do? Well, simply program a destination using Google Maps or Yahoo! Maps, find a place, and the Scape Button can materialize the new environment for you. Are you a Northern European with a West Indian soul? Are you working in Tokyo but need to be at your son's

baseball game in Western Pennsylvania? These are a few of the many uses of the Scape Button. Let technology finally make you happier by changing the surrounding in which you exist.

But enough about the world, what about you? Do you feel like, “Everywhere I go, there I am.” Do you think to yourself, “No matter how fast I run, my shadow is chasing me.” You might be able to iScape your surroundings, but what about your identity? Isn't that what's gotten you down? The Scape Button allows for full bodily transcendence and transmigration of ego and superego. Try your hand at being a vagabond in Eastern Morocco, a sexually loose escort in Central New Jersey, or a capitalist in Malaysia. iScape lets your mind do the walking, and someone else's body do the talking. Stay if u like, but feel free to return to 'yourself' (whoever that really is). What is for sure is that the iScape is leading the way.

Multi-iScape Cataclysm

iScape introduces the *Juggle Interface*. When you juggle 3 iScapes, a wormhole to an alternate dimension opens. In this dimension, everything you know and experience is the same as it was before – although now everything is made from forms of pork and you are a champion sumo wrestler. Yum!

Price

iScape is now available in select countries and kingdoms, Brunei, Lichtenstein, Dubai, and certain parts of Germany. iScape will be available in the US on March 1st, 2007. One can pre-order on OMOS.tech.com, (\$395 US for 5 GB and \$495 US for 12 GB). Anti-stickyfinger wipes available in packs of 10 and 50 (\$3 US, \$10 US).
